About stretch ceilings

More and more designers and architects in the India are recommending a stretch ceiling to clients refurbishing their homes or business spaces.

Why? Because a stretch ceiling can be installed in a few days. It is reliable, low maintenance, low cost and comes in a huge range of finishes and designs, including printed options.

Get bored of the design? No problems it can be easily changed.

Please read on to understand the full benefits of a stretch ceiling.

The advantages of the PVC stretch ceilings.

All bumps, smudges and other defects of the structural ceiling are hidden in one easy step.

Once installed, no further repair or refurbishment is required, this saves on future costs of ceiling repair.

No more dust and water! PVC film will solve all the problems with crumbling plaster and will even hold a large volume of water in case of flooding from above.

PVC stretch ceilings are **recommended for use in schools and medical facilities**, where high cleaning standards are required.

The absolutely flat surface looks like a solid ceiling with a **great finish**

Stretch ceilings are **easy to clean** (dirt and dust is removed any detergent).

Stretch ceilings do not suffer from moisture, do not corrode, do not react with chemically active substances and do not allow condensate to settle, which is particularly important for use in swimming pools, bathrooms, laboratories, etc.

The layer of air between the basic and stretch ceiling have some insulating effect. However it is possible to install insulation and acoustic materials in this space.

Stretch ceilings are easily removed.

The most interesting characteristic of this material is plasticity, no other material can fold, curve and bend so easily, creating curved and rounded shapes, arches, tents, multi-level and abstract options.

PVC stretch ceilings allow you to hide plumbing and ventilation pipes and ducts. Where required, concealed access panels can also be accommodated.

The ceiling will accommodate any variety of lights as well as ventilation, alarm systems and other accessible service points.

Offers a wide range of colours and surfaces
